

CMMC Level 2 Readiness

JUNE, 2026

OUR COMMITMENT

At MAPP Technologies, protecting our customers, partners, and the sensitive information entrusted to us is a core business priority. As cybersecurity expectations across the Defense Industrial Base continue to evolve, we are actively progressing through our Cybersecurity Maturity Model Certification Level 2 readiness journey.

CMMC Level 2 is an important framework designed to strengthen the protection of Controlled Unclassified Information and ensure that organizations supporting the Department of Defense maintain strong cybersecurity practices. For MAPP Technologies, this effort is more than a compliance requirement. It is an opportunity to continue improving our security posture, formalizing our processes, and demonstrating our long-standing commitment to responsible information protection.

Our team has been working diligently to align our policies, procedures, technical safeguards, and supporting documentation with CMMC Level 2 requirements. This includes continued improvements in areas such as access control, system monitoring, incident response, vulnerability management, security awareness, data protection, and risk management.

We are making steady progress toward our targeted November assessment deadline and remain focused on completing the necessary readiness activities in a thoughtful and disciplined manner. Throughout this process, we are working with internal stakeholders, technology partners, and compliance resources to ensure that our cybersecurity program is practical, sustainable, and aligned with the expectations of our customers and the defense community.

MAPP Technologies recognizes that cybersecurity is an ongoing responsibility. Our CMMC Level 2 journey reflects our broader commitment to continuous improvement, operational resilience, and earning the trust of those we serve.

We look forward to continuing this progress and strengthening our role as a trusted partner to customers who depend on secure, reliable, and compliant operations.
